

Requierelement

- rad video tool : <https://www.radgametools.com/bnkdown.htm>
- audacity

assuming you already have a ghwt custom

1. extract your song.pak with honeycomb
2. inside the extracted folder create a folder named data and move the song folder to it
3. recompile the pak with honeycomb
4. delete the "_song" in the name
5. get the audio for your chart put them in audacity and export it as a wav (multitrack isn't supported)
6. open rad video tool and "bink" the audio with these settings

7. open the songlist.q and paste the metadata from your custom
8. open song_string.q and create a text string like this "theviolation_text = "The Violation""
9. for the name of the song in songlist.q put \$theviolation_text or whatever string you choose
10. recompile the patch folder with honeycomb
11. unlock all with the mod menu
